“At the very heart of our conclusions is one, central conviction: the key to future progress in the developing world will be its ability to identify, to develop, and to retain expert and effective home-grown leadership”.

His Highness The Aga Khan

The Aga Khan Academy, Hyderabad, 22 September 2006
The Aga Khan Academy, Hyderabad, is a new, not-for-profit school situated on a 100-acre campus near the Rajiv Gandhi International Airport just south of the city.

It is the second in a global network of day and residential schools for exceptional girls and boys, from all backgrounds, drawn from across India and internationally. It features state-of-the-art facilities, a diverse student body, and an experienced and engaged team of educators and staff.

The Academy provides students with education of the highest international standard in order to prepare them for lives of leadership and service, and to succeed in a globally competitive world.

Admission to the Academy is based on merit. Students of promise, good character and serious intent are considered regardless of their socio-economic background and their family’s ability to pay. Educators are selected on the basis of their commitment to the all-round development of students and their own continued professional development.

The Academy is committed to excellence in all aspects of education. This commitment includes the academic and co-curricular programmes as well as the campus itself. The Academy strives to create a balance between academic demands, sports, cultural activities and community life. Students are challenged to be intellectually inquisitive and socially conscious. They are encouraged to engage with diversity and display a clear understanding of other people’s cultures, social structures, values and beliefs.
The widely recognised International Baccalaureate (IB) programmes have been chosen as the foundation for the Academies’ imaginative and inspiring educational vision.

The Academies’ curriculum stretches and challenges students, encouraging academic rigour, independent learning, enthusiastic inquiry, honesty and integrity in scholarship, and a caring and compassionate outlook. It promotes the international awareness, social responsibility, creativity and high ethical standards needed by leaders in the 21st century. It also prepares students to be effective in their own contexts as well as internationally by ensuring that they have an understanding of national language, history and culture. Students graduate with the IB Diploma, which is a highly respected qualification recognised by universities globally.
In 2000, His Highness the Aga Khan initiated a programme to establish an integrated network of schools, known as the Aga Khan Academies. The first Academy opened in Mombasa, Kenya, in 2003. The second, in Hyderabad, India, began operating in 2011 with the enrolment of students in the Junior School. Senior School students, including residential students, joined in 2012. A third Academy opened in 2013 in Maputo, Mozambique, initially for lower primary students.

Land has been acquired in several locations, and the next batch of Academies is in the architectural design process. When complete, the network of Academies will form a global learning community of 18 schools in 14 countries in Central and South Asia, Africa and the Middle East. Exchanges between Academies allow students and teachers to experience a rich global dimension in education through collaboration and exchange programmes. Ultimately, this network will comprise 2,000 educators and a student body of 14,000 girls and boys, and will graduate 1,400 students of exceptional calibre every year.

The Academies are part of the Aga Khan Development Network (AKDN), which has been involved in education for over a century. AKDN agencies currently run two universities and more than 240 schools and educational programmes ranging from early childhood to post-graduate education. Academy students and teachers enjoy unparalleled opportunities for practical experience and learning by working with AKDN programmes. AKDN has a broad range of initiatives and partnerships in health, culture, rural development, institution-building and the promotion of economic development that aim to improve living conditions and opportunities for the poor, regardless of faith, origin or gender.
The Academy strives to develop future leaders with the skills, knowledge and dispositions to support positive development in their societies. It works toward this by admitting exceptional young people from all backgrounds and providing them with a rigorous and relevant education at the highest international standard.

The Academy prepares students to be intellectually curious, socially conscious and mindful of the need to be citizens of the world. The programme develops students who are able to understand and engage with complex issues of local, national and global significance.
The academic programme is both comprehensive and rigorous. It encompasses formal academics as well as themes that are designed to give students the skills to lead in their fields globally and locally.

The curriculum ensures that students’ theoretical learning is linked to relevant local and international topics through the Aga Khan Academy’s Curricular Strands, which addresses issues of ethics, pluralism, culture, governance and civil society.

The Academies programme allows students to develop their understanding of the world while they build their analytical skills, the ability to learn independently and the desire to make a difference.

Additionally, the programme is designed to equip students with the appropriate technical skills, providing them with the opportunity to explore how technology is shaping communities. Through an active, student-centred approach focused on mastery of several disciplines, the academic programme – together with co-curricular programmes – gives students the skills and ability to pursue a competitive, high-quality, post-secondary education.

The curriculum is built on the framework of the International Baccalaureate (IB), which offers an integrated programme of education that includes the Primary Years Programme, the Middle Years Programme and the Diploma Programme.
The International Baccalaureate Primary Years Programme establishes the foundations for lifelong learning. The programme, for students aged 3–11, focuses on the development of the whole child. It addresses social, physical, cultural and ethical requirements while giving students a strong foundation in all of the major areas of knowledge. Activities are geared towards creating independence, confidence and respect for others. The programme includes a beginner’s computing course, swimming instruction, music and language classes. In their final year of the programme, students carry out an extended, collaborative inquiry project, known as the exhibition, under the guidance of their teachers. This represents a significant event in the life of both the school and students, in which they synthesise the essential elements of the programme and share them with the whole school community. It is an opportunity for students to exhibit the desired attributes and understandings they have developed during their engagement with the programme.

The Middle Years Programme

Students in the Middle Years Programme, aged 11–16, are immersed in a challenging and enriching educational environment which emphasises the mastery of basic skills, the ability to analyse and think critically, the development of self-discipline and good work habits, the acquisition of computer literacy and progressive skill development through physical education. It integrates the study of all the major disciplines, including languages, sciences, literature, social sciences, mathematics, arts, technology and physical education, and culminates in a personal project. The programme also includes a service component designed to encourage students to become involved with their communities. The International Baccalaureate’s Middle Years Programme is recognised by the Association of Indian Universities as an entry qualification to all Junior Colleges in India.

The Diploma Programme

At the Senior School, the Academy is implementing the International Baccalaureate Diploma Programme (DP) for students aged 16–19. This is a two-year course of study that prepares students for university. All DP students study languages, a social science, an experimental science, mathematics and an arts subject. They are encouraged to reflect on the knowledge they gain both inside and outside the classroom through the required Theory of Knowledge. They also conduct research on a subject of their choice for a 4,000-word Extended Essay. Students also participate in a variety of creative endeavours, physical activities and community service projects as part of the Creativity, Action and Service requirement. At the same time as it provides an international academic passport, the DP generally fulfils the requirements of a student’s national education system. Each student’s performance is assessed externally by independent examiners according to global standards applied to all IB schools.
Great teachers are the core of a great school more than any other factor, so the Academy focuses on actively recruiting, carefully selecting and fostering the professional development of exceptional teachers. It identifies and develops teachers — of the highest quality — who are committed to both the all-round development of young people and to their own professional growth.

Providing on-going development for teachers is a hallmark of Aga Khan schools worldwide. Achieving world-class standards, which evolve continually, is a dynamic process that requires continuous investment in the training and re-training of teachers to maintain a world-class faculty.

A distinguishing feature of each Academy is its Professional Development Centre (PDC), which is dedicated to developing new teachers to the highest standards while offering veteran teachers the opportunity to stay on the cutting edge of education through research and practice. As more Academies are established, a community of expertise is being created — and leveraged — through collaboration and physical exchanges.

In addition to setting a high standard of instruction at the Academy, the PDC is serving to deepen the pool of well-trained educators regionally through its outreach efforts, where Academy teachers share their expertise to enhance teaching and learning at government and other schools.

The Academy currently has a student:teacher ratio of about 7.5:1. Once the Academy reaches full enrolment with 750 pupils, there will be approximately 90 teachers. A talented, experienced and diverse team of educators has been selected from a global pool, including Indian nationals, many with international experience. A permanent proportion from overseas will ensure the international mix of the educational experience on offer.

Academy faculty also engage actively with students outside the classroom. A high proportion of faculty live on campus, many as dorm parents. They ensure a safe, nurturing and fun-filled environment for residential students. Dorm parents are trained in matters related to health and safety, community life and interpersonal relations, and possess a high level of energy that allows them to handle multiple tasks while offering guidance and support to the students.
The Academy’s welcoming and inclusive culture is reflected in the peaceful and inviting architecture of the residences.

Boys and girls live in separate student residences. All students are closely supervised by faculty and staff. The residential experience is characterized by an ethos centred on respect, integrity, honesty, fairness, empathy and good humour. Each student is supported in his or her personal growth by a staff member who is trained to bring out the best in each student.

Because many of the least tangible but most important elements of an education – the development of practical leadership skills, the capacity to make ethical judgments, the ability to navigate through complex cultural settings – are formed outside the classroom, the residential programme is designed to promote the learning and growth that comes from constant interaction with a diverse and talented group of teachers and peers. Mealtimes and other gatherings provide residential students with opportunities for informal interaction as well as for discussions, meetings, language development and study groups. This safe and secure environment gives students of all backgrounds the opportunity to thrive emotionally, intellectually and physically.

In general, four students share a room. The rooms are spacious with high ceilings and large windows. Other facilities include a student lounge with a large-screen television, dedicated study areas and a laundry facility. In addition, the Commons, the heart of the campus, houses the dining hall and an array of spaces for school activities.
The academic curriculum is complemented by co-curricular, athletic and community service initiatives that are designed to provide a balanced, well-rounded and comprehensive programme. Students gain an intense and enduring educational experience by engaging in a range of activities with their peers and teachers.

Students are encouraged to do their best in all areas, both inside and outside the classroom, and to expand their horizons by trying new pursuits. The Academy’s purpose-built campus and specialised facilities provide an unparalleled environment in which learning extends well beyond the classroom to all aspects of student life.

The extensive sports facilities include swimming and diving pools as well as tennis courts and sports fields for cricket, football, hockey and athletics. Students are able to pursue artistic and cultural activities in spaces dedicated to fine arts, music and dance, including individual music practice booths and a space for music recording. In addition, the campus landscape has been structured to include outdoor learning spaces as well as areas for social interaction and quiet reflection.
The Academy’s co-curricular programmes are clustered into three main streams, each with a different focus:

**Creative Expression**

By engaging in visual or performing arts, students are encouraged to think creatively and express themselves across different media. Through theatre, art, music and drama, students learn to work together and give expression to the values and lessons they have learned.

**Action**

Through sports, both competitive and non-competitive, students are challenged in their physical abilities and learn values such as good sportsmanship, teamwork and ethical behaviour. They are encouraged to try different activities both as a method of personal discovery and as a way to extend the range of their abilities. They are also encouraged to work with teammates, be motivated to do their personal best and to pass on what they have learned in the process.

**Citizenship**

The Academy encourages students to expand their knowledge and understanding of humanity and civil society and to recognise their responsibilities as members of the local and global communities. Through their involvement in citizenship activities, students gain an understanding of the practical implications of their work and studies. By collaborating with community groups on sustainable projects, they develop an appreciation for human rights and human dignity, and learn how their actions impact the world around them.
His Highness the Aga Khan has underlined the importance of three concepts he sees as essential to creating, stabilising and strengthening democracies around the world: meritocracy, pluralism and civil society. The network of Academies strives to instil in its students the positive values embedded in these concepts — values they will embody and carry with them throughout their lives.

The Aga Khan Academies aim to create ethical leaders who have a strong sense of civic responsibility and who will go on to the best universities in the world and pursue careers of their choice. With multilingual abilities, they will move fluidly within both global and local contexts. They will become leaders in the governments and institutions of civil society in their own countries, in international organizations and in academic, economic and artistic institutions that create positive change in our world.

Alumni from the first Academy in Mombasa are studying at some of the top universities around the world. Many have been awarded prestigious university scholarships. Through their choice of activities and career goals, Academy graduates are demonstrating a strong commitment to community service and the desire to support the long-term development of their countries and regions of origin.
The Academy seeks students representing a diverse range of economic, cultural, ethnic and religious backgrounds. It looks for students who have the ability and motivation to excel academically and who demonstrate leadership in service and other co-curricular pursuits.

Applications to the Academy far exceed places. Selection is based on merit regardless of socio-economic background and ability to pay. Merit is broadly defined as exceptional intellectual potential, leadership, a commitment to learning, a strong sense of integrity, and the desire to work towards and instigate positive change. Financial aid is available to enable access for students with demonstrated financial need. The Academy endeavours to meet the financial needs of each selected student.

The Academy uses a multifaceted process to evaluate applicants. The assessments enable students to demonstrate their cognitive, literary, mathematical, creative and leadership abilities. The Admissions Committee then evaluates candidates based on a range of measures and recommends them for selection.
The Aga Khan Development Network’s (AKDN) education programmes cover a wide spectrum of activities aimed at addressing the full continuum of learning, from early childhood care to university education, including non-formal adult education. Education activities range from family and classroom-focused interventions to national and international policy dialogue. These activities are led principally by the following agencies and institutions, which work together as a system to strengthen education delivery and outcomes:

**The Aga Khan Academies (AKA)** is an integrated network of K-12 day and residential schools in Mombasa, Kenya; Hyderabad, India; and Maputo, Mozambique, with more campuses planned across Africa, South and Central Asia and the Middle East. It aims to help develop these regions’ future leaders. It admits exceptional young people from all backgrounds and provides them with a rigorous and relevant education of the highest international standard.

**The Aga Khan Education Services (AKES)** operate over 240 private and community-based schools. They provide quality K-12 education to children (the majority girls) in many of the more remote regions of nine countries of Central and South Asia and East Africa, with the large majority of schools in Pakistan. The first school opened in Zanzibar in 1905.

**The Aga Khan University (AKU)** provides professional and graduate degree training in medicine, nursing and midwifery and education. It has been operating from campuses in Karachi, Pakistan (since 1980), Dar-es-Salaam, Tanzania, Nairobi, Kenya and Kampala, Uganda (since 2001). The University’s Institute for Educational Development offers Master’s, Ph.D. and certificate training in pedagogy and education management and provides support to government systems in several countries. Planning for faculties of Arts and Sciences and graduate schools is underway for East Africa and South East Asia.

**The University of Central Asia (UCA)** operates Schools for Professional and Continuing Education in remote mountainous regions of Kazakhstan, Kyrgyzstan and Tajikistan since 2000, with plans to provide full undergraduate programmes in upcoming years.

**The Aga Khan Foundation (AKF)** operates programmes in the areas of education, health, rural development, environment and civil society. Within education, AKF works with governments at all levels, civil society organisations and local communities in early childhood development, school improvement (primary and secondary), and youth and adult education.

**The Aga Khan Trust for Culture (AKTC)** focuses on the physical, social, cultural and economic revitalisation of communities in the Muslim world. It operates a variety of education programmes through its museums and exhibitions initiatives, music initiatives, the Aga Khan Program for Islamic Architecture and the ArchNet.org online architectural resource.
“The Academies will be concerned with the whole of the human being – mind, body and spirit – and with the broad range of human aspiration – intellectual, moral, artistic, physical and spiritual. The fact that these are residential academies will contribute enormously to these broad objectives, encouraging students to identify more completely with the school, to help lead it and shape its environment.”

His Highness The Aga Khan
