Partners

AKDN partners with NGOs whose development approaches are in a core area, have strong local ownership and are committed to the long-term sustainability of the partnership. AKDN’s recent partnerships include: Community-based projects in the country’s most remote and marginalized parts of the country.

In addition to the many Kenyan health service providers, partnerships that support training, and services that are relevant to the communities of East Africa.

to public schools, benefiting over 350,000 children. The Foundation has also implemented programmes, which ensure access to quality education for marginalized children. It supports 995 public primary schools, benefiting over 370,000 pupils and 5,700 teachers and educators in some of the most remote and marginalized parts of the country.

The Aga Khan Education Services operates a K-12 International Baccalaureate school at the Aga Khan Academy Nairobi, and a network of 11 schools that follow the national curriculum and incorporate into it a focus on ethics and pluralism.

The Aga Khan Academy in Mombasa seeks exceptional young people, from all backgrounds, with potential to become future leaders. Students with high academic and leadership potential are selected regardless of their ability to pay.

The Aga Khan University School of Nursing and Midwifery offers continuing and higher education up to Bachelor of Science Degree in Nursing (BSN) level to working nurses, allowing them to remain at their workplaces while pursuing professional development.

The Medical College provides postgraduate programmes in medicine, surgery, anaesthesia, obstetrics and gynaecology, family medicine, radiology and pathology. It offers professional health education, strong research programmes that support training, and services that are relevant to the communities of East Africa.

The tertiary education is significantly subsidised for most Kenyans (most AKU students pay about 15 percent of the cost of their education).

AKDN in Kenya

Over the last century, the Aga Khan Development Network’s (AKDN) many programmes and diverse interventions have helped improve the quality of life for some of the country’s most resource-poor communities. By partnering with Government and the private sector, AKDN has helped communities to develop their own educational standards, meet healthcare needs, and generate financial activity to enable resources to be accessed by those in greatest need.

An Agreement of Cooperation for Development signed with the Government of Kenya in 1996 recognises AKDN’s contributions to national development and creates an enabling framework for its activities.

Social Development

Health Care: The Aga Khan Health Services operates high-quality secondary care hospitals in Mombasa and Kisumu, including state-of-the-art diagnostic services, and 11 outreach clinics. The Aga Khan University Hospital in Nairobi (AKUHN) is a 300-bed tertiary care and teaching hospital.

AKUHN, a not-for-profit but financially self-sustaining hospital, is one of the only hospitals in East and Central Africa to receive Joint Commission International (JCI) accreditation. It dispenses over 60,000 consultations per year, serves a state-of-the-art Heart and Cancer Centre. It has 43 outreach clinics and laboratory collection points. Each year, the hospital admits 98,000 patients through free medical camps, admits 30,000 patients and sees 940,000 outpatients.

Since 1983, the Community Health Department, based at the Aga Khan Hospital in Mombasa, has strengthened the establishment of primary healthcare practice in the country. It works in partnership with Government and NGOs and the Ministry of Health to provide training and technical support from the dispensary level to the national level.

The Community Health Department has also established community units and promotes maternal and child health services in 14 select government health facilities, thus facilitating service access to a population of over 150,000 in several sub-counties of Coast Province.

This continuum of healthcare activities from primary to tertiary care forms the basis of an integrated health system that ensures timely, high-quality services in the right setting. It is anchored in the community through community health workers, who in turn are connected and referred to the nearest dispensary, health centres, sub-county and country hospitals, and finally to the secondary and tertiary hospitals in Mombasa, Kisumu and Nairobi. They are connected by relayers, e-Health and telemedicine.

The Aga Khan Foundation (AKF) has trained over 600 community health workers to deliver preventive and curative interventions around maternal and child health initiatives at the community and pre-primary school level. Much emphasis is placed on promoting cost-effective childcare models through strengthening the capacity of home-based and child care centres for children under the age of three.

Early Childhood Development: AKF’s Madrasa Early Childhood Programme has provided quality, culturally relevant and holistic early childhood development for over 400,000 children in East Africa. The programme’s integrated curriculum around national policy and practice, and has trained and supported over 2,000 pre-school teachers.

Education: AKDN’s education activities span early childhood to university education. Through its Whole School Approach, AKDN has supported over 1,000 community-based pre-schools attached

School Improvement

Each year, AKDN directly reaches 67,000 students from its own institutions and over 1.2 million students from its school improvement programme, under government and low-cost private schools in marginalised communities.

Health Care

The AKU Hospital in Nairobi is one of the only hospitals in East and Central Africa to receive Joint Commission International accreditation, an external validation that provides the highest international standard of patient care and safety.

Early Childhood

For over 30 years, AKF’s Madrasa Early Childhood Programme has raised the standards and accessibility of education in some of the country’s most educationally relevant and holistic early childhood development projects in East Africa. It has graduated 400,000 children and trained thousands of pre-school teachers and caregivers.

Economic Development

Frigo Ltd., Kenya’s largest exporter of processed green beans, endeavours to forge a better future for the country’s small-scale farmers. The company employs over 3,000 people, most of whom are women, and supports around 70,000 small-scale farmers.

Nursing & Midwifery

In a country with a dire shortage of nurses, AKU is training leaders who are providing outstanding care and professional training as much-needed educators. Over 90% of alumni work at government hospitals and have far-reaching impact on the health services of the communities from which they come.

Future Leaders

The Aga Khan Academy is committed to supporting the long-term development of Kenya by training nearly 600 young Kenyans each year to become leaders of tomorrow. Admission is merit-based and candidates without financial means are offered scholarships.
